

# The Low-Code Audit, Risk, Compliance & Quality Management Software

AuditRunner is designed to provide a flexible, user-friendly, and comprehensive software solution that encompasses all facets of Governance, Risk and Compliance (GRC) Management. Its low-code architecture allows organizations of all sizes to interconnect people and systems to design and run all GRC related processes seamlessly.

## AuditRunner Technology

**According to Gartner, by 2024, low-code development will be responsible for more than 65% of business application development activity.\* AuditRunner is a software utilizing this technology.**

AuditRunner is developed over a fully customizable enterprise grade low-code software platform. The end-user interfaces and process design tools, being completely web based, can be run on any device. The technology AuditRunner is built upon digitalized 3000+ business processes for 10+ industries. This low-code environment offers unmatched capabilities to AuditRunner users:

### Modular:

AuditRunner has 20+ GRC modules designed to work in a fully integrated manner. Output of a module can feed another and upgrades are automatically propagated among modules.

### Scalable

The Modules can be deployed on demand - per function, department or as regulations require.

### Multi-Language:

AuditRunner supports multiple end-user languages so that the same content can be displayed in different languages regardless of the original design.

### Customizable:

With the low-code platform, software customizations and new feature developments can be delivered 3X faster and more robust than with a conventional development environment. It empowers both professional and line-of-business developers.

Unique business requirements, organizational structure changes, new regulatory dynamics can be addressed in an agile, maneuverable and cost-effective manner.

### Access Controlled Company-wide Collaboration:

All business units, such as audited departments, auditors, executive team and even 3rd parties can actively take part in the audit process. This enables all parties to own their part in the GRC process, decreasing unnecessary workload on the GRC team, increasing company-wide transparency, and building a searchable, trackable enterprise memory.

## Deployment and Updates

Deployment and migration are hassle free and allows for the use of the platform within weeks of kickoff rather than months. Auditrunner does not require client installations.

Thanks to its proprietary versioning system, AuditRunner can host multiple versions at the same time, hence updates do not block or break any ongoing jobs. AuditRunner provides omni-channel user experience with any device, anywhere, any time.
